

Preparing Producers for Site Assessments

As an Advisor, you have many tools to prepare for PQA Plus® site assessments. But how can you help producers prepare? By providing this checklist to producers before the site assessment, you can help diminish any uncertainties producers may have about assessments, and ensure more efficient time on their operation. Prior to your arrival, the producer should have gathered these 10 items:

1. Identification of individuals who are PQA Plus certified
2. Premises ID Number
3. Number of animals onsite, including number of breeding and non-breeding
4. Housing type(s)
5. Documentation of veterinary relationship
6. One year of medication and treatment records
7. One year of daily observation records
8. Training documentation
9. Euthanasia Plan
10. Emergency Action Plan
